

ROOFING ESTIMATOR TRAINING

Program Syllabus

Introduction:

In this self-paced course, you will be introduced to the knowledge you will need to understand the world of roofing estimating and processes. This course is intended for those interested in becoming an estimator in roofing or a person currently employed in the industry with the desire to learn about an estimating career. It is also for an existing estimator who wants to sharpen their skills to gain an edge over their competition. This course was also designed for Roofing Companies to train their new or existing employees in the required skills to prepare accurate and profitable project estimates. This intermediate course is an excellent gateway to our advanced estimating training course.
